

Application Monitoring and Optimization

Work breakdown and photos:

- Created web app service
- Configured the web app
- Created a log analytics workspace
- Enabled Monitoring for my resources
- Set up an alert and metrics
- Created alerts
- Set up metrics
- Optimized application performance
- Analysed monitoring data
- Used Kusto Query Language to query and analyse collected data
- Implement changes based on insights
- Set up continuous monitoring

The screenshot shows the Microsoft Azure portal interface for creating a new Web App. The browser address bar shows the URL `portal.azure.com/#create/Microsoft.WebSite`. The page title is "Create Web App". The "Basics" tab is active, displaying the following information:

- Project Details:**
 - Subscription: `Simplilearn HOL 100515`
 - Resource Group: `(New) dot` (with a "Create new" link)
- Instance Details:**
 - Name: `Dotglasses` (with a green checkmark)
 - Full Name: `-f5drg7h3exf5hgaw.eastus-01.azurewebsites.net`
 - Unique default hostname (preview) on: ☒ (with a link to "More about this update")

At the bottom of the form, there are three buttons: "Review + create" (highlighted in blue), "< Previous", and "Next : Deployment >". The Windows taskbar at the bottom shows the date and time as 18:23 on 2024/09/30.

The following features are optional and billed separately. Microsoft recommends enabling them to ensure the most robust protections and capabilities to monitor and secure your web applications.

Application Insights

Azure Monitor application insights is an Application Performance Management (APM) service for developers and DevOps professionals. Enable it below to automatically monitor your application. It will detect performance anomalies, and includes powerful analytics tools to help you diagnose issues and to understand what users actually do with your app. Your bill is based on amount of data used by Application Insights and your data retention settings. Microsoft Azure portal interface showing the 'Diagnostic settings' page for a resource named 'Dotg'.

The page displays a table of diagnostic settings. The table has columns: Name, Storage account, Event hub, Log Analytics workspace, Partner solution, and Edit setting.

Name	Storage account	Event hub	Log Analytics workspace	Partner solution	Edit setting
dotglasses organisation	-	-	Dotglasses	-	Edit setting

Below the table, there is a section titled 'Click 'Add Diagnostic setting' above to configure the collection of the following data:' followed by a list of data types:

- HTTP logs
- App Service Console Logs
- App Service Application Logs
- Access Audit Logs
- IPSecurity Audit logs
- App Service Platform logs
- App Service Authentication logs (preview)
- AllMetrics

Microsoft Azure portal interface showing the 'Create an alert rule' page.

The page is divided into two main sections: 'Create an alert rule' and 'Select a resource'.

Create an alert rule:

- Scope:** Select scope (No resource selected yet)
- Condition:** Create an alert rule to identify and address issues when important conditions are found.
- Actions:** Review + create
- Details:** Review + create
- Tags:** Review + create
- Review + create:** Review + create

Select a resource:

The 'Select a resource' dialog shows a list of resources. The 'Resource' column is selected, and the 'Locations' column is set to 'All locations'.

Resource	Resource type	Location
<input checked="" type="checkbox"/> > glass	Resource group	-
<input type="checkbox"/> > ODL-az-1470761	Resource group	-

Below the table, there is a section titled 'Refine scope' with two dropdown menus: 'Resource type' (Select a resource type) and 'Location' (Select a location).

Below the 'Refine scope' section, there is a section titled 'Selected resources' with 3 scopes:

- > dot (Resource group: -)
- > leware (Resource group: -)
